

ABHINAV A

Python Full-Stack Developer

Kozhikode, Kerala, India · abhinavramesh74@gmail.com · +91-9496247873 · [LinkedIn](#) · [GitHub](#)

Professional Summary

Backend-Focused Python Full-Stack Developer with hands-on experience in Django, FastAPI, PostgreSQL, and React. Currently an intern at Bridgeon Solutions, building and maintaining production REST APIs with JWT authentication and database query optimization. Contributed to Skyriact, a multi-tenant ERP + AI platform, building the Inventory & Warehouse module and its AI-powered inventory features. Independently built and deployed EcoCharge, an EV trip-planning platform with geospatial routing and an AI assistant, and CricGear, an e-commerce platform deployed on AWS. Seeking Backend/Full-stack roles where clean API design and database performance matter.

Technical Skills

Languages	Python, JavaScript/TypeScript, SQL
Backend & API	Django, DRF, FastAPI, SQLAlchemy, Celery, Microservices, WebSockets, REST API design
Database	PostgreSQL, PostGIS, pgvector, Redis
Security & Auth	JWT/OAuth2, RBAC, MFA, GoogleAuth
AI & ML	RAG (pgvector), LLM Agents, LangGraph, Embeddings, Prompt Engineering
Frontend	React.js, Next.js, Tailwind CSS
Cloud & DevOps	Docker, AWS(EC2,RDS,S3), GitHub Actions, CI/CD, Nginx, Git

Experience

Full-Stack Developer Intern

Sep 2025 - Present

Bridgeon Solutions, Kozhikode

- Build and maintain production REST APIs with Django and DRF, including JWT authentication, role-based access control, and request validation on every endpoint.
- Cut query counts and response times on high-traffic endpoints by eliminating N+1 patterns with `select_related` and `prefetch_related`.
- Verify API flows end-to-end in Postman before release and run background jobs, caching, and containerization with Celery, Redis, and Docker.

Diploma Trainee Engineer

Dec 2021 - Dec 2022

Bajaj Auto Pvt Ltd, Pune

- Tracked production line metrics and diagnosed mechanical faults under time-critical conditions in a high-volume manufacturing environment.

Projects

Skyriact - Multi-Tenant ERP + AI Platform (Group Project)

[Github](#)

FastAPI, SQLAlchemy 2.0, PostgreSQL, Row-Level Security, Redis, Celery, Next.js, Docker, GitHub Actions

- Built the Inventory & Warehouse module for a multi-tenant SaaS ERP, with per-company isolation via PostgreSQL Row-Level Security, composite tenant keys, and middleware-resolved tenant context.
- Designed an immutable stock-movement ledger (counts derived from movements, never set) with atomic warehouse transfers, no-negative-stock constraints, and one-time low-stock alerts.
- Added AI features that suggest, never execute: restock suggestions with human approval, stock-anomaly detection, and semantic search via pgvector.
- Cut a key dashboard report's p95 latency from 42 ms to 16.6 ms (CI-benchmarked) and maintained 3,300+ automated tests and 80+ migrations on a Docker + GitHub Actions stack.

EcoCharge - Smart EV Charging & Trip Planning Platform

ecocharge-nine.vercel.app | [Github](#)

Django, FastAPI, PostgreSQL/PostGIS, pgvector, Redis, Celery, Django Channels, Daphne, WebSockets, Docker, React, Tailwind CSS

- Built a concurrent-safe slot booking engine (atomic transactions, overlapping time-window detection) with Razorpay for automated payments, refunds, and signature verification.
- Developed a FastAPI microservice with an LLM-powered agent using RAG search (pgvector + SentenceTransformers), Redis-backed user memory, prompt-injection guards, PII/Aadhaar redaction, and streaming responses.
- Designed an energy-aware route planner using vehicle charging curves, OSRM routing with cached distance matrices, and a data pipeline ingesting 4 sources across 400+ cities and 55+ highway corridors.
- Added real-time features: Google OAuth login and live station/slot updates via WebSockets (Django Channels + Daphne); deployed 6 containerized services to AWS EC2 through GitHub Actions with HTTPS.

CricGear - E-Commerce Platform

cric-gear-ecommerce.vercel.app | [Github](#)

Django, DRF, PostgreSQL, React.js, AWS EC2, AWS RDS, JWT

- Architected and deployed a full e-commerce backend on AWS EC2 with PostgreSQL on RDS, configuring infrastructure including security groups and environment settings.
- Designed 15+ REST endpoints with JWT authentication, role-based access control, and field-level validation; integrated a React.js frontend (Hooks, Axios) and verified the full flow end-to-end via Postman.
- Handled the full deployment lifecycle, including EC2 provisioning, RDS setup, and environment hardening, gaining end-to-end production AWS experience.

Education

Bachelor of Computer Applications (BCA)

2024 - 2027

Manipal University Jaipur

Diploma in Mechanical Engineering (Lateral Entry)

2019 - 2021

Kerala Govt Polytechnic College Kozhikode

CGPA: 8.57 / 10
